

Customer support Bot :

This project demonstrates a practical implementation of a **customer support chatbot** using Dialogflow. It showcases conversational design, intent recognition, and real-time response handling, making it suitable for real-world customer service applications.

Objectives

- Build a smart chatbot for customer support
- Design intent-based conversational flows
- Understand how NLP matches user queries to intents
- Implement fallback handling for unmatched queries
- Test the chatbot in a live environment

I want to know about refund olicy

DEFAULT RESPONSE

We're sorry to hear that you want a refund. After your return is approved, refunds are usually processed within 5-7 business days and credited to your original payment method. You'll be notified as soon as the refund is initiated. Feel free to reach out to support if you need further help.
